ASHWINI YEDAVE

Software Engineer - Pune, Maharashtra

+91 9307835712 | ashwiniyedave93@gmail.com | LinkedIn | Portfolio

PROFILE

Software Engineer with 4+ years of experience building scalable, interactive enterprise applications using Micro-Frontend Architecture for Large Customer Bases across financial services and e-commerce domains with Strong front-end expertise in Angular, React.js, HTML5, CSS3, JavaScript, TypeScript, and enterprise application development. Proficient in Java, Spring Boot, RESTful APIs, and responsive UI development. Skilled in Git, Jira, Postman, VS Code, Jenkins, and Swagger. Skilled with AI-powered tools including ChatGPT, GitHub Copilot, Google Gemini, and Claude AI to improve productivity, code quality, and debugging efficiency. Possesses strong problem-solving, logical, analytical, and communication skills.

EDUCATION

Amity University Online, Noida, Uttar Pradesh **7.86/10 SGPA**
Master of Computer Applications in AI & ML *Jan 2026 - 2027*

Punyashlok Ahilyadevi Holkar Solapur University, Solapur **9.32/10 CGPA**
Bachelor of Computer Applications *Mar 2022*

TECHNICAL SKILLS

Languages & Frameworks : Angular (up to v20), RxJS, NgRx, React.js, JSP, Java, Spring Boot, JavaScript, TypeScript, HTML5, CSS3, Bootstrap, Angular Material, PrimeNG, Tailwind CSS

Backend & Cloud : Microservices Architecture, RESTful APIs, AWS (Lambda), Spring Security, Hibernate, Spring Data JPA

Database : MySQL, SQL

Build, DevOps & Quality : Maven, SonarQube, Karma, Git, GitLab, Bitbucket, Jira, Postman, Swagger, VS Code, IntelliJ IDEA, Jenkins, Power BI

AI & Productivity Tools : ChatGPT, CodeX, GitHub Copilot, Claude AI, Google Gemini

Methodologies : Agile, Scrum

WORK EXPERIENCE

Software Engineer — WSFX Global Pay Ltd - Pune, Maharashtra **Oct 2024 – Present**

Project Name: Operation Management Portal

Project Description: Developed and maintained an enterprise Angular-based forex and remittance platform consisting of Admin and Partner portals for managing leads, orders, student and personal remittance, forex cards, partner operations, user management, roles and permissions, and reporting workflows.

Key Contributions:

- Architected responsive Angular 20 modules for Admin and Partner portals using TypeScript, Bootstrap, and PrimeNG, reducing page load times by 30%.
- Spearheaded features for lead management, order processing, and remittance workflows serving 6+ major financial partners (IDP, Poonawalla, Credila, EasyMyTrip, Zaggle, Asego).
- Integrated 40+ RESTful APIs via Postman and Java backends, cutting API response parsing delays by 25% across critical transaction pipelines.
- Enforced role-based access controls (RBAC) and dynamic UI authorization across 10+ distinct user permission tiers.

- Built 20+ reusable UI components and dynamic form generators, improving frontend team development velocity by 20%.
- Standardized unit testing using Karma and code quality analysis via SonarQube, maintaining over 85% test coverage and eliminating critical code smells.
- Leveraged AWS Lambda for serverless backend tasks and utilized AI development tools (GitHub Copilot, Claude AI) to accelerate code generation and debugging workflows by 35%.

Angular Developer — Zest India IT Services Ltd - Pune, Maharashtra **Jun 2022 – Oct 2024**

Project Name: Electro Hub

Project Description: Electro Hub is an e-commerce application for electric equipment, machinery, hardware tools, and power machines.

Key Contributions:

- Improved client-facing Angular modules utilizing RxJS and state management, improving application performance and UI throughput by 25%.
- Integrated end-to-end RESTful APIs for real-time order tracking and catalog search across 10,000+ SKU product listings.
- Implemented modular lazy loading and micro-frontend practices, reducing initial bundle size by 35% and optimizing overall application scalability.
- Automated build and deployment pipelines using Maven and GitLab CI/CD, reducing release frequency from weekly to bi-weekly while enabling zero-downtime deployments.
- Resolved 100+ critical bug tickets across cross-browser responsiveness and UI state synchronization during active production cycles.

PROJECTS

Project Name - Expense Tracker

Project Description: Developed full-stack Expense Tracking application using Angular, Java, Spring Boot, and MySQL to manage daily transaction categorization, user analytics, and dynamic financial dashboards.

Key Contributions:

- Designed full-stack application architecture using Angular 20 frontend and Spring Boot backend with JWT security authentication.
- Built complex MySQL database schema handling real-time expense reporting, filtering, and CRUD operations with under 100ms response time.
- Applied lazy loading and RxJS state management, achieving a 98+ performance score on Google Lighthouse audits.

CERTIFICATIONS

- Java Full Stack Developer - Java By Kiran Academy
- English Communication & Public Speaking - Nobel English Communication
- Claude Code in Action - Anthropic Claude
